Internet Appendix I: Founding Years of the IPO Companies

This dataset is an addition to the Jay Ritter's data on the founding year of the IPOs for the companies which went public between 2005 and 2016. The information is manually extracted from companies' prospectuses or Wikipedia

Issuer (as appears in SDC Platinum)	Issue Date	Founding Year	PERMNO	GVKEY

Internet Appendix II. Letter Example

This is the first letter that the SEC wrote to Affimax company, which went public in 2006. We denote the main parts of a typical letter (header, title, introduction, itemized part, ending and signature), and we highlight the SEC film number, item header and letter writer signatures. The full letter is available at this link:

https://www.sec.gov/Archives/edgar/data/1158223/00000000000000049985/filename1.pdf

1. Header

October 16, 2006

Arlene Morris President and Chief Executive Officer Affymax, Inc. 4001 Miranda Avenue Palo Alto, CA 94304

Re: Affymax, Inc.

2. Title

File 333-136125 SEC Film Number Form S-1 filed July 28, 2006

Dear Ms. Morris:

3. Introduction

We have reviewed your filing and have the following comments. Where indicated, we think you should revise your document in response to these comments. If you disagree, we will consider your explanation as to why our comment is inapplicable or a revision is unnecessary. Please be as detailed as necessary in your explanation. In some of our comments, we may ask you to provide us with supplemental information so we may better understand your disclosure. After reviewing this information, we may or may not raise additional comments.

Please understand that the purpose of our review process is to assist you in your compliance with the applicable disclosure requirements and to enhance the overall disclosure in your filing. We look forward to working with you in these respects. We welcome any questions you may have about our comments or on any other aspect of our review. Feel free to call us at the telephone numbers listed at the end of this letter.

General Item header #1

4. Itemized Part

1. We note that in your risk factor titled "We have initiated binding arbitration...," you have added disclosure relating to J&J's patent application and state that a patent could be issued this year. Does this revised disclosure reflect new facts which suggest that the patent might be issued? If so, please describe any such facts in the risk factor.

Management's Discussion and Analysis of Financial Condition and Results of Operations

Item header #2

Critical Accounting Policies and Significant Judgments and Estimates

Revenue Recognition, page 36

2. We acknowledge your response to comment 2. We note that you recognize revenue related to third-party development expense reimbursement pursuant to your arrangement with Takeda as you incur the related expenses. We also note that you recognize revenue related to the manufacture and supply arrangement for Hematide API on a cost basis upon delivery and defer the profit margin indefinitely. Tell us how your accounting treatment for both of these transactions correlates to EITF No. 00-21 and your conclusion that all of the elements involved in the Takeda arrangement represent a single unit of accounting.

Stock-Based Compensation, page 38 Item header #3

- 3. We acknowledge your response to comment 9 of our letter dated August 31, 2006. Please furnish your letter dated September 15, 2006 regarding stock compensation via EDGAR. Please also revise your filing to disclose and/or provide us with the information that follows.
 - Please tell us and disclose which methodology (i.e. income, market, etc.) management used to retrospectively value the equity instruments issued during the 12 months prior to the most recent balance sheet date, June 30, 2006. Please also disclose the assumptions used in conjunction with that methodology.
 - Please disclose the significant factors underlying the difference between the fair value of your employee share options as of each grant date and your estimated IPO price. That is, disclose how the achievement of each internal milestone discussed on page 5 of the October 2, 2006 letter impacted your fair value assessment at each different point in time. Tell us why you believe that the milestone achievements outlined on page 5 of the October 2, 2006 letter were not considered "true measures" of the company's fair value, given that you disclose on page 38 that management relied on those milestones in determining the fair value of all compensatory equity instruments leading up to the third-party valuation date of February 10, 2006.
 - It appears you have simply relied on the initial underwriter estimate of fair value for all periods subsequent to February 10, 2006. The underwriter's preliminary estimate of the ultimate IPO price does not appear to be an appropriate valuation methodology for your pre-IPO equity transactions. In addition, it is not appropriate to revise your valuations based on a change in the IPO price since the fair value on a given date should not change based on subsequent events.
 - Please tell us why a linear, look-back approach, as discussed in your letter dated
 October 2, 2006, is appropriate given that you achieved significant internally
 specified milestones during the period, such as your entry into the agreements with
 Takeda. The linear approach does not appear to be an appropriate valuation
 methodology.

Notes to Consolidated Financial Statements Note 8. Stock-Based Compensation, page F-33

- 4. We acknowledge your response to comment 11 and reissue our comment, as you have not yet disclosed your estimated IPO price. Please revise/update the vested/unvested intrinsic value option information included on page 39 of your MD&A based on your estimated IPO price through the date of the most recent balance sheet presented.
- 5. We acknowledge your response to comment 12 and will continue to reissue our comment until you have disclosed an estimated offering price. Therefore, please disclose in your financial statements, at a minimum, the following information for equity instruments granted during the 12 months prior to the date of the most recent balance sheet included in the filing: the number of options or shares granted at each applicable date; the related exercise price; the underlying fair value of the common stock; and the intrinsic value, if any. Additionally, please provide all of the above information to us, supplementally, for equity instruments that you issue subsequent to the date of the latest balance sheet that you include in your filing through the date of your latest response.

5. Ending

As appropriate, please amend your filing in response to these comments. You may wish to provide us with marked copies of the amendment to expedite our review. Please furnish a cover letter with your amendment that keys your responses to our comments and provides any requested supplemental information. Detailed cover letters greatly facilitate our review. Please file your cover letter on EDGAR under the form type label CORRESP. Please understand that we may have additional comments after reviewing your amendment and responses to our comments.

We urge all persons who are responsible for the accuracy and adequacy of the disclosure in the filings reviewed by the staff to be certain that they have provided all information investors require for an informed decision. Since the company and its management are in possession of all facts relating to a company's disclosure, they are responsible for the accuracy and adequacy of the disclosures they have made.

We will consider a written request for acceleration of the effective date of the registration statement as a confirmation of the fact that those requesting acceleration are aware of their respective responsibilities under the Securities Act of 1933 and the Securities Exchange Act of 1934 as they relate to the proposed public offering of the securities specified in the above registration statement. We will act on the request and, pursuant to delegated authority, grant acceleration of the effective date.

We direct your attention to Rules 460 and 461 regarding requesting acceleration of a registration statement. Please allow adequate time after the filing of any amendment for further review before submitting a request for acceleration. Please provide this request at least two business days in advance of the requested effective date.

You may contact Amy Bruckner (202) 551-3657 if you have questions regarding comments on the financial statements and related matters. Please contact Zafar Hasan at (202) 551-3653 or me

at (202) 551-3715 with any other questions.

Sincerely,

6. Signature

Internet Appendix III: Verification of Match between the LDA Topics in the SEC Letters and the Title of the SEC Paragraphs

These figures aim to verify the labelling of the SEC Letters' LDA topics, where each topic is labelled with the SEC letter item heading that provides the closest match (as described in more detail in the text). First, these figures illustrate the percentage of the most frequent words (in the LDA topic) that are also the most frequent within the paragraphs belonging to the matched item heading. Second, the figures illustrate the words that are common in the LDA topic but are not common in the matched paragraphs, and they denote the item heading in which they are the most common.

Panel 0 of this figure provides a color-coding of all paragraphs. This color coding is consistent throughout all panels of the figure. For instance, the bright red color represents "Business" paragraphs, and the grey color corresponds to "Revenue Recognition" paragraphs.

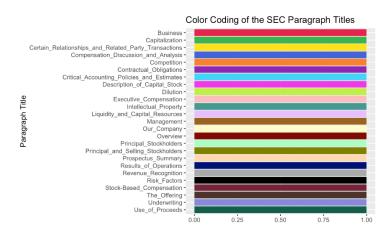

Panels 1-8 show the 100 most frequent words in the topic. The length of the bar represents the frequency of each word in each topic. In the Panel 1 the word 'revenu' is first and has the longest bar, denoting that it is the most common word in Topic 1 and its frequency is 3.27%. The words 'provid' and 'disclosur' are the next in frequency, representing 1.75% and 1.73% of the topic, respectively.

The coloring of the bars within Panels 1-8 is based on the following procedure. First, for the given LDA topic we look at the paragraphs that fall under the best matched item heading (i.e., for Topic 1, we look at the paragraphs that fall under the Revenue Recognition item heading), and we extract the 200 most frequently used words from these paragraphs. If a given word in the figure falls within these top 200 words, then we color this word the corresponding paragraph color. For instance, words 'revenu', 'provid', 'disclosu' are among top-200 most common words in the Revenue Recognition paragraphs and thus they are colored in grey (the color corresponding to revenue recognition, as shown in Panel 0).

If a word is not among the 200 most common words in the matched paragraph, then its color reflects the paragraphs where its frequency is the highest. For instance, the word 'busi' is not among top 200 words in the Revenue Recognition paragraphs, and it has the highest weight in the paragraphs under the "Business" title; thus it is colored in red.

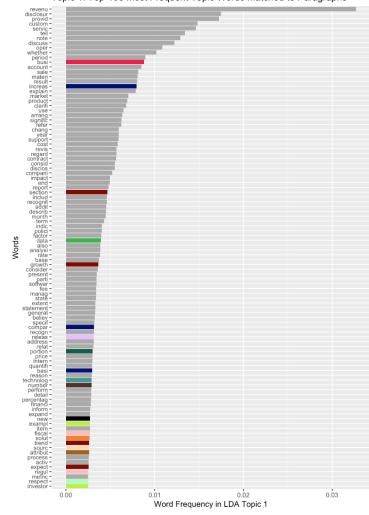

We repeat the same analysis for all eight topics. We apply a consistent approach across all 8 topics (including Topic 8, which we ultimately label as the Boilerplate topic). For Topic 8, the most closely matched paragraphs are those under the section heading "Our Company", though as illustrated in the last panel, the match is not close.

Results highlight that the first seven topics are closely matched to the paragraphs, with one single color that is prominent throughout each panel. Moreover, the residual words are not focused within any one item heading, as reflected by the fact that they have many different colors. In sum, these figures provide added confidence in the labelling of the seven topics of interest, indicating that each topic is concentrated within the paragraphs falling under the matched item heading. In contrast, the last topic (Topic 8, which we ultimately label as boilerplate) provides an example of a topic that does not have a concentrated content and just represents a mixture of different factors.

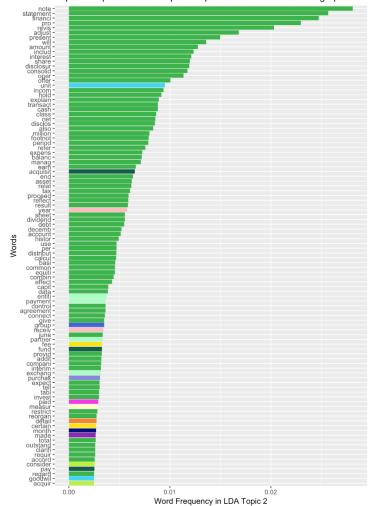

Topic 1. labelled as 'Revenue Recognition' in the paper

Topic 1. Top-100 Most Frequent Topic Words Matched to Paragraphs

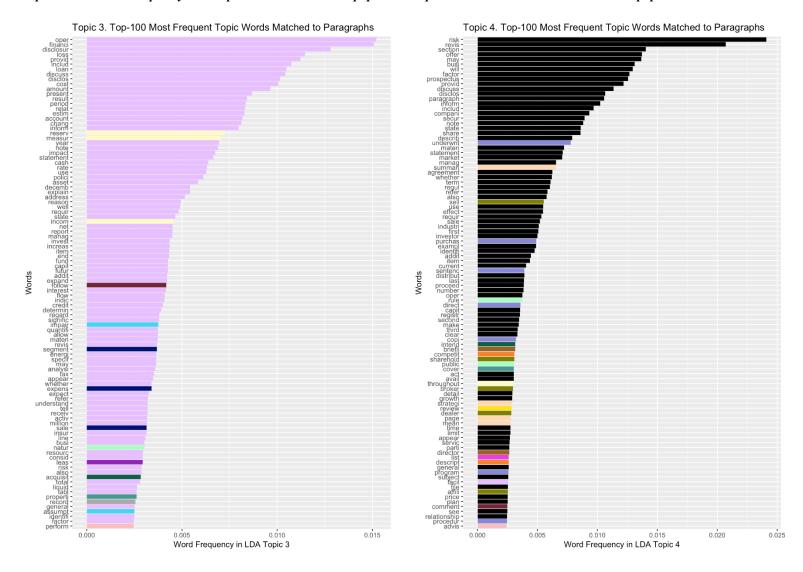

Topic 2. labelled as 'Capitalization' in the paper

Topic 2. Top-100 Most Frequent Topic Words Matched to Paragraphs

Topic 5. Top-100 Most Frequent Topic Words Matched to Paragraphs 0.02 0.04 Word Frequency in LDA Topic 5 0.06

Topic 6. Top-100 Most Frequent Topic Words Matched to Paragraphs 0.01 0.02 Word Frequency in LDA Topic 6 0.03

Topic 7. labelled as 'Intellectual Property' in the paper

Topic 8. labelled as 'Boilerplate' in the paper

Internet Appendix IV: Topics Extracted from S-1 Prospectuses

The sample consists of 952 IPOs between 2005 and 2016, for which first versions of prospectuses were downloaded from SEC EDGAR website. We employ a 28-topic LDA analysis across this set of the first prospectuses. This figure illustrates the most salient word-roots in each topic. The size of the word corresponds to its saliency within the topic.

Internet Appendix V: Total Offer Size Updates and the Content of the First SEC Comment Letter.

This table is similar to that shown in Table 7. The sample consists of 952 IPOs between 2005 and 2016, for which we download SEC comment letters from EDGAR. The dependent variable equals the total offer size update, equal to the percentage change from the initial filing size (defined as the midpoint of the initial price range times shares filed) to the final offer size (defined as the IPO offer price times shares offered). Independent variables include the natural log of the number of words in the topic in the first SEC letter, the natural log of the number of words in the topic in the S-1, the number of SEC letters before the price range is set, and company and offer controls (company size, number of segments, age, underwriter rank, law firm rank, S-1 length and S-1 uncertainty), where coefficients on these controls are suppressed. All regressions include Fama-French 48 industry and year fixed effects, and errors are robust and clustered at the Fama-French 48 industry level.

Internet Appendix VII: IPO Outcomes and the Content of the First SEC Comment Letter, across all topics

This table shows regressions similar to those reported in Table 9. While Table 9 focused only on the revenue recognition topic, here we show analogous regressions for each of the 8 topics: capitalization (Panel A), liquidity (Panel B), risk factors (Panel C), stock compensation (Panel D), executive compensation (Panel E), intellectual property (Panel F), and boilerplate (Panel G). Each panel contains 10 regressions, one in each column. The respective dependent variables include: initial returns, volatility over the first year after the IPO, Amihud illiquidity over the first month after the IPO and over the first year after the IPO, a dummy equal to one if there were secondary shares sold in the IPO, secondary shares as a percent of total shares sold in the IPO, the size of the overallotment option that was exercised, a dummy equal to one if insiders sold shares around the lock-up expiration, and abnormal returns over the first six months and the first year after the IPO. Within each regression, the independent variable of interest is the natural log of the number of words in the topic, in the first letter the company receives from the SEC. Regressions also include the same set of controls as used in prior tables, as well as Fama-French 48 industry and year fixed effects. Errors are robust and clustered at the Fama-French 48 industry level.

Panel A: Capitalization Topic

									Abnormal	
	Initial Return	Volatility First Year	Amihud Illiquidity First Month	Amihud Illiquidity First Year	Secondary Shares (Dummy)	Secondary Shares Offers	Overallotment Exercised	Insider Sales	Return First half- year	Abnormal Return First Year

Internet Appendix VIII: Lawsuits and Content of SEC Letters

This table explores the relationship between the content of the SEC Letters and future lawsuits of a firm. We obtain information about IPO class actions from Stanford Securities Class Action Clearinghouse. We indicate that an IPO is followed by a lawsuit if: (i) there is a class action lawsuit against the company within a year of the offer date, and (ii) this class action is filed under Chapter 11. In total 51 out of 952 IPOs in our sample were followed by a lawsuit. Panel A shows the results of a univariate test, which compares whether the average number of words on a given topic in the first SEC letter is the same across companies with versus without a post-IPO lawsuit. Panel B aims to determine which factor is the most significant predictor of a lawsuit. It reports the R² from the series of following regressions: $Lawsuit = \beta_0 + \beta_1 \cdot X_i$, where X_i is one of the 25 variables listed in the table. Variables in the table are organized in descending order of R². Panel C extends the approach in Panel B with the use of the LASSO regression technique. The bottom x-axis shows the maximum % of lawsuit variance we can explain if we use only the number of variables from the top x-axis. The legend of lines on the graph shows which variables we should use, and the y-axis gives the coefficients on these variables. The red line indicates the path for the Revenue Recognition in the SEC letters. According to the plot: (i) revenue recognition should be used in any model which explains lawsuit variables (as the red line never equals 0), and (ii) the coefficient on this variable should always be positive.

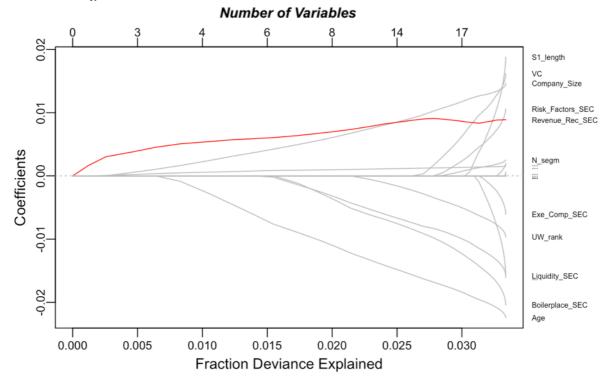

Panel A. Univariate comparison

Topic in SEC Letter	Avg # Words in a Topic in First SEC Letter for IPOs with a Lawsuit After [N = 51]	Avg # Words in a Topic in First SEC Letter for IPOs without a Lawsuit After [N = 901]	T-statistics for the Difference
Revenue Recognition	663.02	441.26	2.43**
Capitalization	361.22	364.80	-0.08
Liquidity	365.34	372.03	-0.10
Risk Factors	529.68	510.40	0.39
Stock Compensation	333.43	329.16	0.10
Executive Compensation	413.06	387.37	0.59
Intellectual Property	307.44	407.36	-1.98*
Boilerplate	112.96	120.62	-0.95

Panel B. R² in Univariate Regression

N	Variable	R^2
1	Revenue Recognition (in SEC Letters)	0.70%
2	Company Size	0.56%
3	Law Firm Rank	0.53%
4	Executive Compensation (in S-1)	0.36%
5	Boilerplate (in S-1)	0.36%
6	Company Age	0.25%
7	Revenue Recognition (in S-1)	0.15%
8	Capitalization (in S-1)	0.15%
9	Liquidity (in S-1)	0.15%
10	Stock Compensation (in S-1)	0.15%
11	Intellectual Property (in SEC Letters)	0.13%
12	S1 Uncertainty	0.13%
13	Risk Factors (in SEC Letters)	0.12%
14	Capitalization (in SE Letters)	0.10%
15	Risk Factors (in S-1)	0.08%
16	Intellectual Property (in S-1)	0.08%
17	Liquidity (in SEC Letters)	0.06%
18	VC Dummy	0.05%
19	Boilerplate (in SEC Letters)	0.05%
20	Executive Compensation (in SEC Letters)	0.04%
21	# of Segments	0.03%
22	Stock Compensation (in SEC Letters)	0.03%
23	S-1 Length	0.03%
24	UW Rank	0.02%
25	JOBS Act Dummy	0.00%

Panel C. LASSO Regression Results

Internet Appendix IX: Comparison of withdrawn IPOs and matched sample, variables in propensity score model (as used in Column 3 of Table 10)

The regression in column 3 of Table 10 is based on a matched sample, which is formed from a propensity score model. For each withdrawn IPO we select up to three completed IPOs in the same year and Fama-French 48 industry with the closest propensity score. The propensity score is based on offer size, number of segments, length of S-1, and Nasdaq returns. This table reports the mean value of each of these variables, for the withdrawn IPOs and for the matched sample of completed IPOs. The T-statistic and associated p-value tests for the significance of the difference in means.

Variable	Withdrawn IPO Sample	Matched sample of completed IPOs	T-statistic of difference in means	P-Value
Company Size	2.92	3.30	-1.11	0.27
# of Segments	1.00	1.10	-2.17	0.03
S1 Length	11.25	11.29	-1.11	0.27
Nasdaq Returns	-0.11%	0.90%	-1.46	0.15
